PROJECTS

Aurum — Equity Valuation Terminal

2026

Creator / Lead Developer · Next.js · TypeScript · FastAPI · Python

aurum-terminal.vercel.app

- Constructed a five-year DCF with adjustable WACC and terminal growth returning intrinsic value per share.
- Modeled an LBO with a debt schedule and cash sweep returning IRR and MoIC against a 20% sponsor hurdle.
- Analyzed peer-median EV/EBITDA and EV/Revenue comps benchmarking a target against a custom peer set.
- Built a formula-driven Excel export with linked DCF and LBO models plus a one-page PDF valuation tearsheet.

Portfolio Risk & Analytics Platform

2026

Creator / Lead Developer · Python · pandas · FastAPI · Streamlit

institutional-risk-dashboard.streamlit.app

- Constructed a quantitative risk engine computing portfolio beta versus the S&P 500 and parametric 95% VaR.
- Evaluated Sharpe ratio, maximum drawdown, and HHI portfolio concentration across a year of live daily returns.
- Modeled Monte Carlo simulations replaying 1987, 2008, and COVID-19 crises to stress-test portfolio drawdown.
- Deployed two production applications on a fault-tolerant live market-data pipeline with a documented REST API.
